

Bicycle Sales Dashboard – Project Report

Introduction

In this project, I created a Bicycle Sales Dashboard using Microsoft Excel to analyze sales performance, profit trends, customer contribution, and country-wise distribution.

Dashboard Overview

The dashboard includes key performance indicators such as Total Sales, Profit, Unit Sold, top-selling products, customer contribution, and monthly trends.

Filters for Year and Month allow dynamic analysis of the data.

Key Performance Indicators (KPIs)

1 Total Sales – \$118,726,353

This shows the overall revenue generated from bicycle sales.
It represents the total business turnover during the selected time period.

2 Profit – \$16,893,702

This KPI shows the total profit earned after sales.
It helps in understanding the profitability of the business.

3 Units Sold – 1,125,806

This represents the total number of bicycle units sold.
A high unit sales figure indicates strong market demand.

Detailed Chart Analysis

◆ Top Selling Product

Product ID: **PROD_ID_002**

Sales: **\$33,011,143.95**

This product generates the highest revenue among all products.
It is the leading contributor to total sales.

◆ Year Wise Sales (Product Name – Sunburst Chart)

The sunburst chart shows product sales distribution across multiple years.

It allows us to:

- Compare yearly product performance
- Identify strong-performing years
- Observe product growth patterns

◆ Monthly Profit Generated

This line chart represents profit trends month-wise.

From the graph:

- Profit fluctuates throughout the year
- Some months show peak profit performance
- Lower profit months indicate potential seasonal slowdown

This helps management plan better strategies during slow months.

◆ Sales % by Country

This donut chart shows percentage distribution of sales among countries such as:

- Canada
- England
- Germany
- India
- Italy
- Japan

Some countries contribute a higher percentage of total sales, indicating strong markets. Others show potential for business expansion.

◆ Top 10 Customers by Sales

This bar chart highlights the top 10 customers contributing maximum revenue.

This analysis helps:

- Identify key customers
- Maintain strong customer relationships
- Focus on high-value clients

A small group of customers contributes a large portion of revenue.

◆ Sales Breakdown % by Segment

Segments include:

- Government
- Small Business
- Enterprise
- Medium Business
- Channel Partners

The Government segment contributes the highest percentage (~44%), followed by Small Business and Enterprise.

This helps understand which business segment drives most revenue.

Filters Used

- Year Filter (2021, 2022)
- Month Filter (Jan–Dec)

The filters interface consists of two sections. The top section, titled "Year", contains two buttons labeled "2021" and "2022". The bottom section, titled "Months", contains a grid of 12 buttons labeled with the months of the year: Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sep, Oct, Nov, and Dec.

These filters make the dashboard interactive and allow dynamic performance analysis.

Tools & Techniques Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- KPI Cards
- Slicers
- Data Cleaning & Formatting
- Custom Layout Design

Conclusion

The Bicycle Sales Dashboard provides a complete overview of sales and profit performance. It helps in:

- Monitoring revenue and profit
- Identifying top products
- Tracking monthly performance
- Analyzing country-wise contribution
- Understanding customer and segment distribution
