

Sales Dashboard Report

Introduction

For this project, I created a Sales Dashboard in Microsoft Excel to analyze the overall sales performance of a company from 2014 to 2017. The main purpose of this dashboard is to understand sales trends, profit growth, customer contribution, and category-wise performance in a clear and visual way.

About the Data

The dataset contains information such as:

- Order Date
- Category and Sub-category
- State
- Customer Name
- Sales
- Profit

The data includes transactions from the years 2014 to 2017.

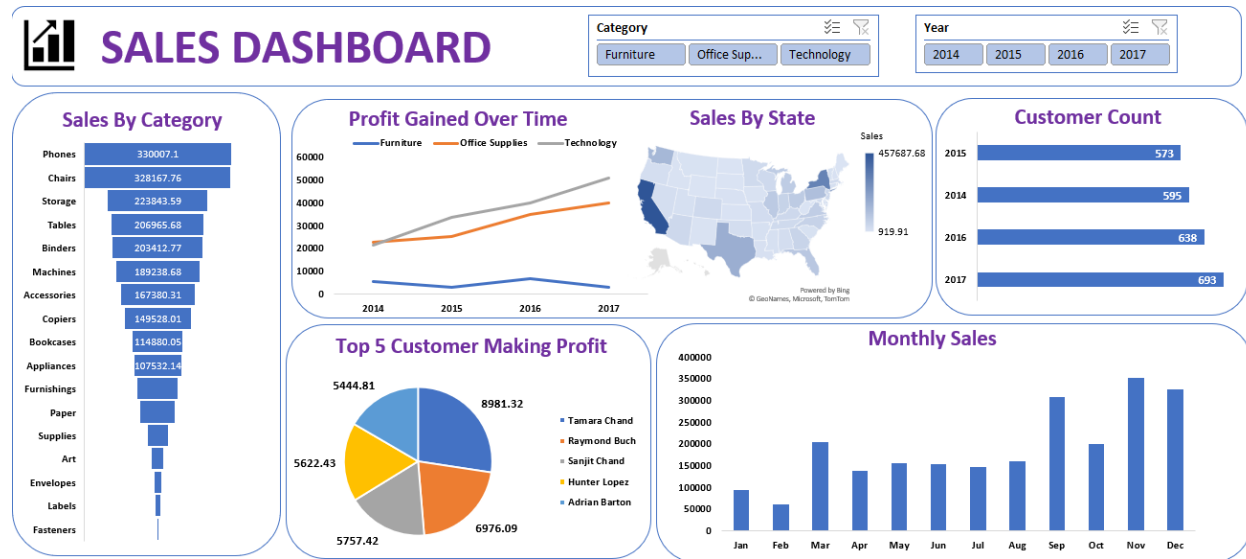

Before creating the dashboard, the data was cleaned properly so that pivot tables and charts work correctly.

Tools and Techniques Used

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers for filtering by Category and Year
- Map Chart
- Data Cleaning (Date formatting and validation)

Dashboard Overview

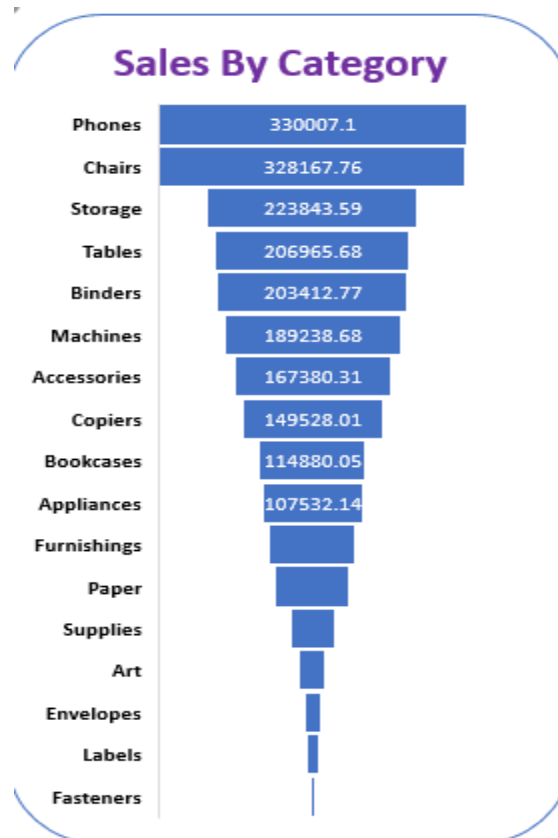

The dashboard includes multiple sections:

1. Sales by Category

This section shows total sales for different categories like Phones, Chairs, Storage, Accessories, etc.

Sub Categories Wise Sales	
Row Labels	Sum of Sales
Phones	330007.1
Chairs	328167.76
Storage	223843.59
Tables	206965.68
Binders	203412.77
Machines	189238.68
Accessories	167380.31
Copiers	149528.01
Bookcases	114880.05
Appliances	107532.14
Furnishings	91705.12
Paper	78479.24
Supplies	46673.52
Art	27118.8
Envelopes	16476.38
Labels	12486.3
Fasteners	3024.25
Grand Total	2296919.7

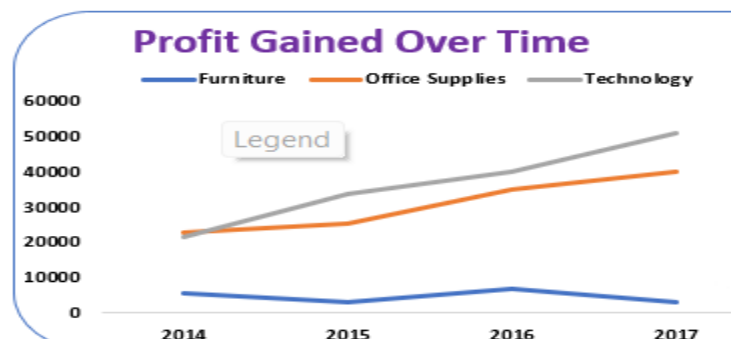

From the chart, it is clear that some categories like Phones and Chairs contribute more to total sales compared to others. Lower categories like Labels and Fasteners contribute less.

2. Profit Gained Over Time

This line chart shows profit trends from 2014 to 2017 for:

- Furniture
- Office Supplies
- Technology

Category profit trend				
Sum of Profit	Column Labels			
Row Labels	Furniture	Office Supplies	Technology	Grand Total
2014	5469.77	22593.4	21492.95	49556.12
2015	3015.17	25099.55	33503.97	61618.69
2016	6959.93	35061.24	39774.1	81795.27
2017	3018.44	39736.69	50684.64	93439.77
Grand Total	18463.31	122490.88	145455.66	286409.85

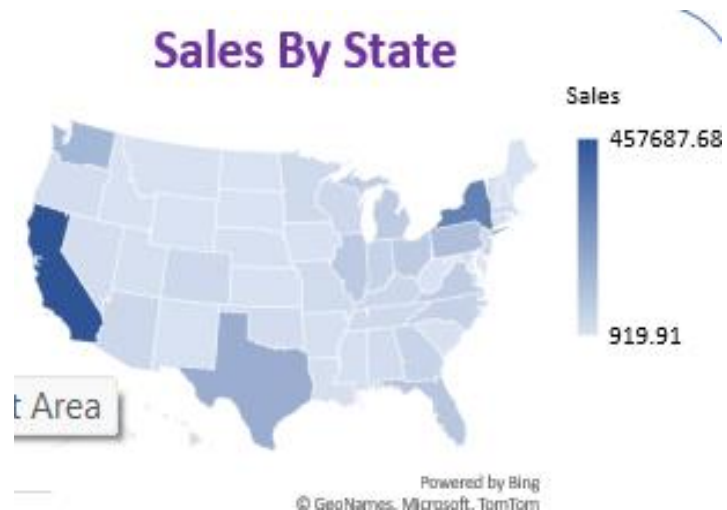

We can observe that Technology shows steady growth in profit over the years. Profit overall is increasing year by year, which indicates business growth.

3. Sales by State

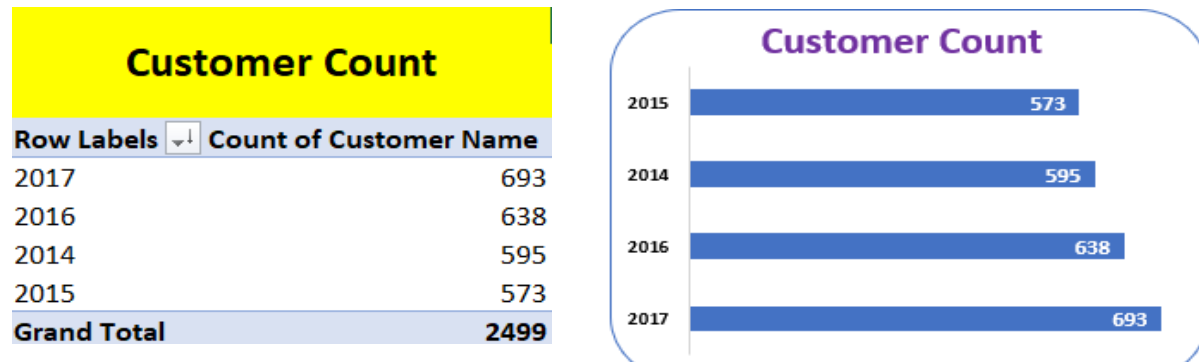

This is shown using a map chart. It helps in understanding which states are generating higher revenue. Some states have darker shades, meaning higher sales contribution compared to others.

Sales By State	
Row Labels	Sum of Sales
California	457687.68
New York	310876.2
Texas	170187.98
Washington	138641.29
Pennsylvania	116512.02
Florida	89473.73
Illinois	80166.16
Ohio	77976.84
Michigan	76269.61
Virginia	70636.72

4. Customer Count (Year-wise)

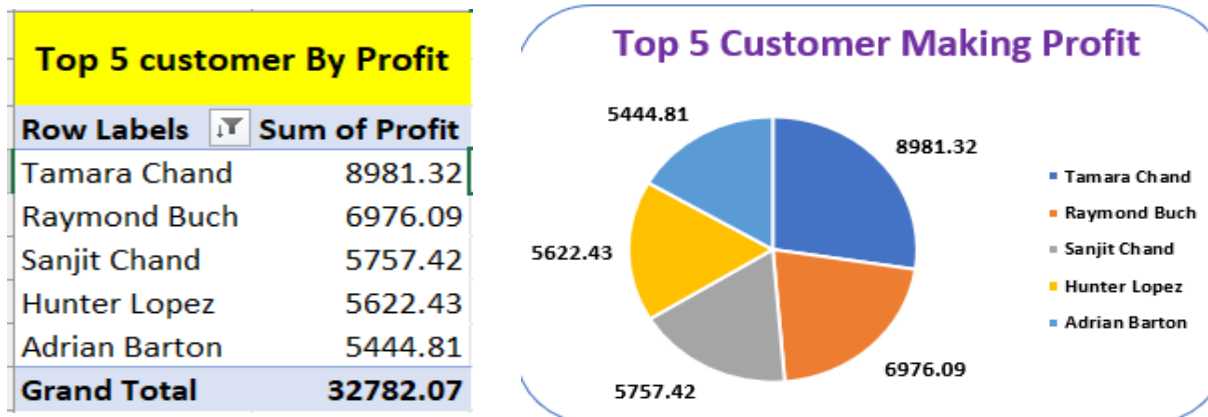

This chart shows the number of customers each year.

There is a gradual increase in customer count from 2014 to 2017. This indicates that the company is expanding and gaining more customers every year.

5. Top 5 Customers Making Profit

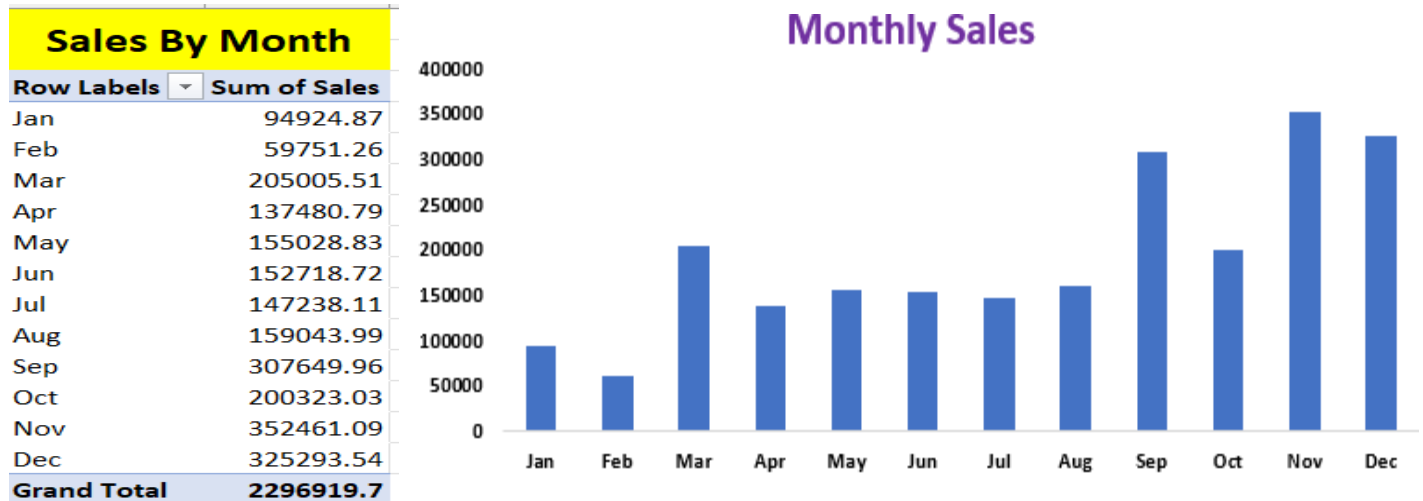

This pie chart shows the top 5 customers who generated the highest profit.

It highlights that a small number of customers contribute a large portion of profit. This information can help the company maintain good relationships with these key customers.

6. Monthly Sales

The monthly sales column chart shows fluctuations throughout the year.

Sales are usually higher towards the end of the year, especially in November and December. This may be due to seasonal demand or year-end purchases.

Conclusion

Overall, this dashboard provides a clear and interactive way to analyze sales performance. It makes it easier to identify profitable categories, track yearly growth, and understand customer behavior.
